

Image Placement Guide

Where to drop each Python chart, Tableau/Power BI screenshot, the CSV, and the app visuals — mapped to the 24 slides of **RailSmart Final PPT.pptx**. The slide text is already written; you only add the visual noted.

#	SLIDE	WHAT TO PLACE	SOURCE
1	Title	— <i>nothing (optional small logo)</i>	none
2	What is RailSmart?	<i>Optional: 3D-train / app hero shot</i>	APP
3	Aim & Objectives	— <i>nothing (text only)</i>	none
4	The Problem	The £133,568 unclaimed-compensation bar pair	PYTHON notebook \$10.4
5	The Dataset	Screenshot of the cleaned CSV table (or df.head())	CSV railway_cleaned.csv
6	Data Quality	<i>Optional: the .notna() code cell / before–after</i>	PYTHON \$4 & \$11.6
7	Feature Engineering	<i>Optional: feature cell or correlation heatmap</i>	PYTHON \$8 / \$9.7
8	The Solution	<i>Optional: your architecture diagram</i>	none
9	Punctuality Baseline	Journey-status pie/bar (86.8 / 7.2 / 5.9)	PYTHON TABLEAU \$9.1 · or KPIs
10	Where the Money Leaks	Unclaimed-compensation chart	PYTHON TABLEAU \$10.4 · gap sheet
11	Why Trains Are Late	Delay-cause bar (Weather 32.9% ...)	PYTHON TABLEAU POWER BI \$9.2
12	Route Reliability	Worst-routes bar / on-time table	PYTHON TABLEAU \$10.2
13	The Urgency Tax	Urgent-vs-planned price bar (+38.3%)	PYTHON \$10.3
14	Business Recommendations	— <i>nothing (3 text cards)</i>	none
15	Forecasting	30-day backtest / forecast with interval	PYTHON \$14
16	Predictive Models	Feature-importance charts	PYTHON \$13.1
17	Honest Model Evaluation	Confusion matrices (delay + claim)	PYTHON \$13
18	AI Vision — YOLOv8	Frame with detection boxes + live count	AI docs/person_count_frame.png
19	What We Built	2×2 grid: Tableau · Power BI · Web · Mobile	TABLEAU POWER BI APP
20	The Live Product	Web + mobile screenshots (and your QR)	APP docs/*_preview.png
21	Key Achievements	<i>Optional: KPI summary strip</i>	PYTHON TABLEAU \$11.6 · KPI header
22	Limitations	— <i>nothing (text only)</i>	none

23 Future Work — Egypt — *nothing (3 text columns)*

none

24 Thank You — *nothing (add your QR / repo)*

none

PYTHON notebook charts

TABLEAU dashboard / sheets

POWER BI report

CSV the cleaned data

APP web / mobile screenshots

AI YOLOv8 frame

none text-only

Where each tool goes

Python → slides 4, 9, 10, 11, 12, 13, 15, 16, 17 — the whole analysis & modelling story. Export figures straight from **data_analysis_and_cleaning.ipynb**.

Tableau → your KPI dashboard goes on **slide 19**; individual sheets are the alternative on 9–12. Build order in **docs/TABLEAU_BUILD.md**.

Power BI → one report screenshot on **slide 19** (also usable on 11 or 12).

The rest

CSV → **slide 5**: a clean screenshot of railway_cleaned.csv in Excel.

Web + Mobile → **slides 19 & 20** (optionally 2). Ready-made shots in **docs/**: dashboard_preview.png, passenger_preview.png, manager_preview.png.

YOLO / AI → **slide 18**: docs/person_count_frame.png.

Text-only (no image): 1, 3, 8, 14, 22, 23, 24.

Slide 19 is your one "all four tools together" moment — give it your four strongest screenshots. You don't have to fill the optional slides; a clean text slide beats a cramped one. Notebook section numbers refer to data_analysis_and_cleaning.ipynb.
